ABSTRACT

This paper presents the design and the implementation of an online based babysitting application. This is application babysitting service and information storage system created specifically for working families in metropolis city. Since the rate of working women in the cities is increasing; Parents are in desperate need of help when it comes to taking care of kids or babysitting place them. The main goal of this application to connects parents who need babysitter services for their child, want to lend a hand. And also can appear for the job through this application. And parents can select the suitable babysitter for their child according to their requirement like near by babysitter, review, etc.

Keywords : Andriod Studio , Andriod Application , Babysitting, Babysittier
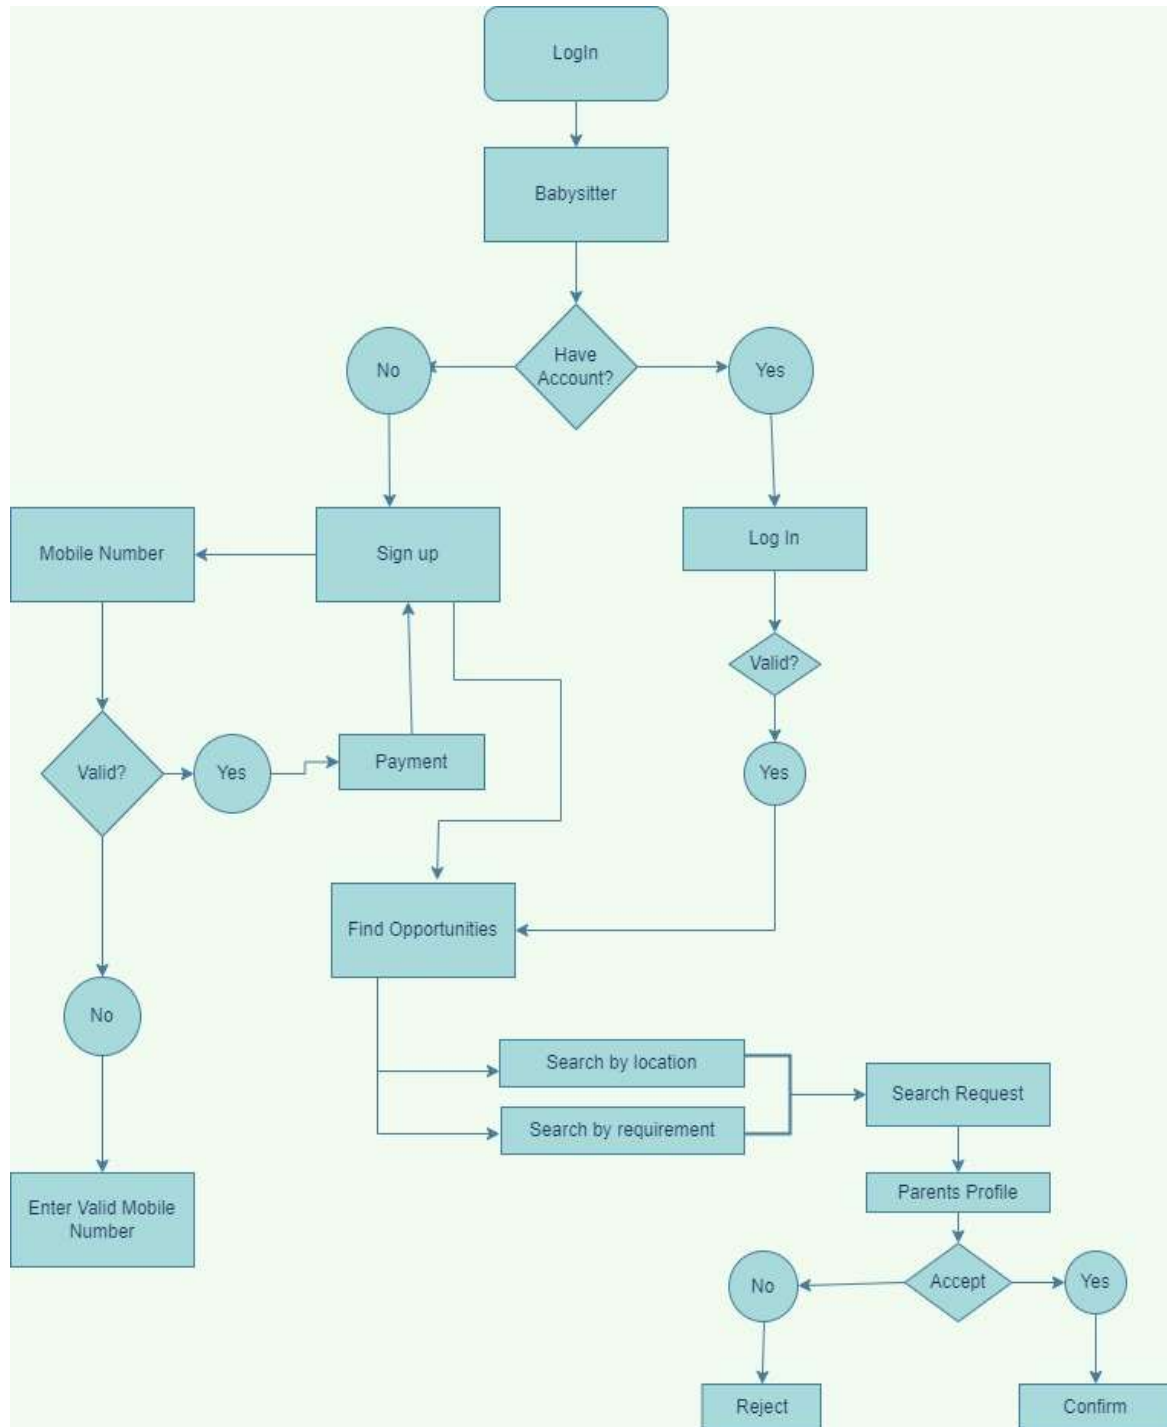

Introduction

It is fact that parents are not always going to be available to care for their child. Parents have jobs to make a life easy , comfortable, and lavish. That is how the concept of babysitting came in the true event. Depending on the need between the parent and babysitter, the babysitter can do his/her job in a certain amount of time and get paid for it. A babysitter's job include many task like bathing the child, helping child to do homework, and feeding to the child and many more. The candidate for babysitting are females as females has more understanding for the child's care more than the male candidate. The main issue is that how two parties i.e. babysitter and parents get in touch and hoe they make sure they are suitable for each other this is also main thing. As already mentioned, babysitter mobile application will make easy path for communication between parents and the babysitter. And based on it's features and functionalities, both party must be satisfied with the each other. Parents will be able to check different babysitters registered on this application, and choose the best one according to their requirement.They will be able to do so through a feature known as "rating", where parents show their interest in a babysitter by rating the babysitter's card to the right. Those that the parents did not find matching, they can go for more . A babysitter will be able to go through the form which is filled by the parents in need of a babysitter. Profile that the babysitter feels fit for the requirement of parents, which is stated in the parents' description, parents can book the babysitter. However, those that the babysitter feels is out of his or her capabilities can be ignore by the parents.
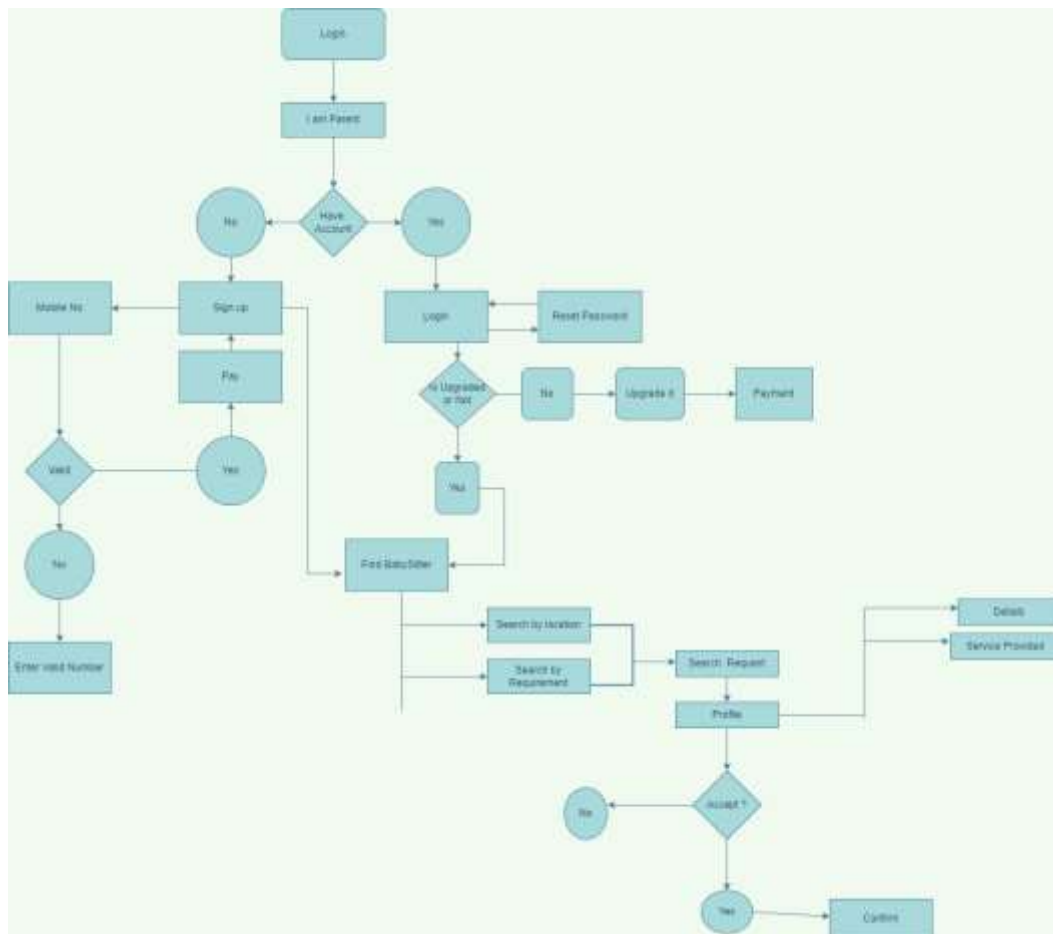

Features

Babysitting is a large marketplace for families looking for childcare babysitter. It has different features that make it easy to connect with babysittr available for short or long-term positions or occasional babysitting jobs.

The babysitting app, helps babysitters and child's parents connect more personally and easily. It helps to find the right match for child and their choice. The app has many features that make it different. Some of these features include –availability of babysitter, push notifications features, booking/scheduling feature, customer chat service, viewing profile and cost estimation.
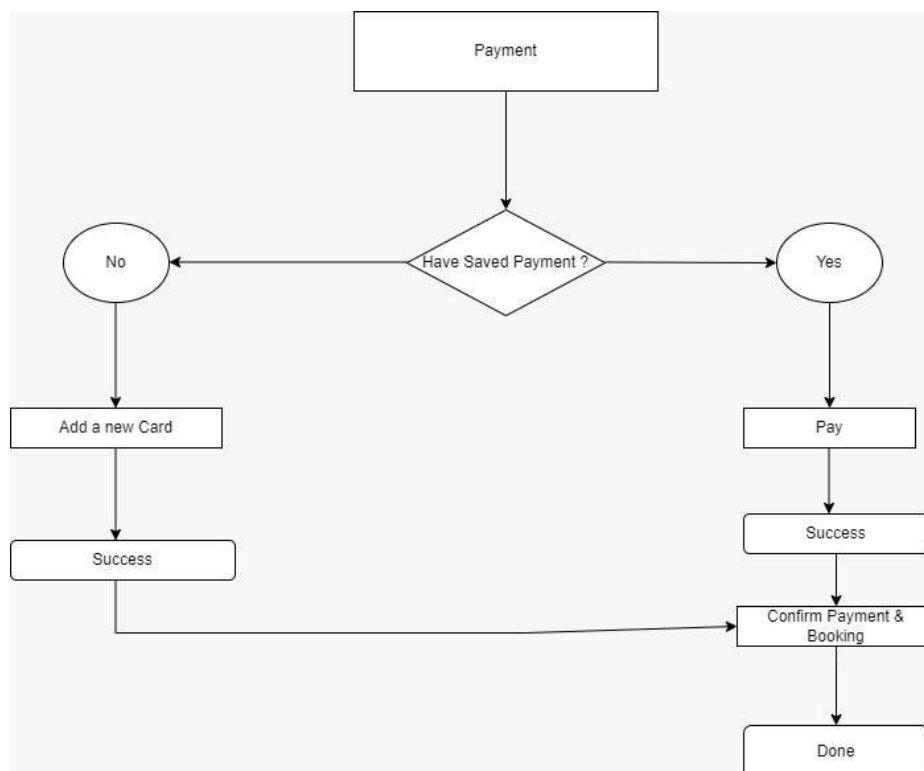

- Availability of Babysitter
- Push Notifications Features
- Booking/Scheduling Feature
- Customer Chat Service
- Viewing Profile

Future Scope

The need of babysitter or demand of babysitter is increasing daily as the both parents are working and cannot give enough time to take care for their child.

Thus, to fulfill this need of parents babysitter application is in demand.

This application helps to parents to get easily access the babysitter fir their child to take care in trusted and secure manner.

And it is very useful for both parties.

Conclusion

 The babysitting application is a gift for the working parents and Parents who can't give enough time to take care their child. It also motivates emotionally as the app encourages parents to focus on their work by their stuff without worrying about their child.
