

UFOs and Human: Understanding the Relevance, Purpose and Humofunctional Implication

Joseph Oyepata Simeon

Department of Pharmacology and Toxicology, Faculty of Pharmaceutical Sciences, Federal University, Oye-Ekiti, Ekiti State, Nigeria.

ABSTRACT

The planet, Earth, is a unique habitat without a relatable neighbour. From ancient times there has been report of unparalleled activities and visitations by beings with close human physical characteristics but are not exactly human. These visitations leave behind notable and unexplainable exploits that scientists still struggle to explain with natural faculty. There has been several competing and unclear views on the potentials and possibilities of strange being visitation to our planet at different times and ways. There has also been an uncaring universal approach to relating with these UFOs and aliens, that is, to aggressively pursue and capture them to satisfy various interests. This work attempts to provide a possible insight into understanding the past, purpose and humofunctional implication of UFOs and human.

Keywords: UFOs, alien, human, universe, Earth, planet

Introduction

Extraterrestrial life sometimes colloquially referred to as alien life, is hypothetical life that may occur outside Earth and which did not originate on Earth¹⁻⁵. Unidentified flying object (UFO) is any perceived aerial complicated phenomenon that cannot be immediately identified, captured or explained⁶⁻¹². They are believed to be controlled, possessed or driven by aliens (who will also be referred as UFOs)¹³⁻¹⁹. UFOs have been viewed as invaders, intruders and threats. They are perceived as enemies of humanity who may have issues with our ways of planetary function and possession or envy our supposedly supernature, persons or way of life²⁰⁻²⁵.

Scientists have tried to at the least aggressively understand them and their intentions for visiting our planet and/or universe²⁶⁻³². Scientists and skeptic organizations such as the Committee for Skeptical Inquiry have provided prosaic explanations for a large number of claimed UFOs being caused by natural phenomena³³⁻³⁶ human technology³⁹⁻⁴³, delusions⁴⁴⁻⁴⁸, or hoaxes⁴⁹⁻⁵³. While unusual sightings have been reported in the sky throughout history⁵⁴⁻⁵⁶, UFOs did not achieve their current cultural prominence until the period after World War II, escalating during the Space Age⁵⁸⁻⁶⁰. The 20th century saw studies and investigations into UFO reports conducted by governments (such as Projects Grudge and Sign in the United States, and Project Condign in the United Kingdom), as well as by organisations and individuals. Scientists and astronomers express varying degrees of enthusiasm for the possibility of intelligent life in the universe. However, scientists generally dismiss the idea that there are aliens visiting Earth^{4,35,60}. They are generally contained as agents or beings from other planets with possible intention to colonize, takeover or harm the Earth^{61,62}. These views may not be completely true, as there are other explanations as to who they may be.

These could be extrauniversal beings from another universe. Based on reports from sparsely reported encounters, physical analysis of these beings suggests that they are of 'humoid' subspecies^{54,59,60}. They are well built with facultative ability (possibly depending on their mission) with ability to carry out a specific task with ease. They are beings with unique nucleation and cellular functions. It is possible they are all of one race (called Tanimola oyepata race) because they do not undergo or suffer from evolutionary effects and because almost all encounters reported showed that they have near physical similarities. They may be our past, present and/or future. As earlier published that the Earth may be an alien planet from another universe (Oyepata's Universe) that may have been released from our parent universe due to a decrease in pull in force (Oyepata Force) or due to extremely stronger centripetal force by our current (step parent) universe, called Dare's Universe^{34,60}. We may have originally been like the UFOs until we were lost to another universe with different planetary and universal conditions that consequentially cascade into evolutionary features anatomically and physiologically. All living things and including humans have undergone tremendous changes of evolutionary proportion. These include longevity, earthquakes, reproduction, sickness, reproduction and adaptation^{4,9}. There may have been notable interaction or support between UFOs and/or aliens with ancient men⁴⁵. These may have accounted for several unnatural beliefs, beyond human projects, ability, knowledge and science that have puzzled current reality^{6,61}.

If the UFOs have been from our Universe, their existence and extraterrestrial activities could have been captured or traced by current advanced technology. They appear as beings with strict and specific mission to their previously relatable habitat and relatives. They use principles and mechanisms of operation and medium of transportation that may be un-timely and unclear to us. It is on record that there have been series of unexpected encounters between humans and UFOs. These extrauniversal beings seem to have super-advantage of advanced manipulative science or abstract-intelligence and technology,

when encountered in most cases they effortlessly veer off (possibly not for negative adrenaline reason) with clear difficulty for humans to trace the relics of their whereabouts or destination. It is pleasant to note that they appear not to have immediate intention, although long time intention is unknown.

UFOs may not be an immediate threat to human. Rather, they are concerned and probably sympathetic to the human race and our lost (confusing) identity. They are fascinated as to how humans have evolved (and proportionately mutated from them) in our current universal environment. They may have established an indirect, partial and/or 'blank' link of communication and observation (research) between our planet/universe and their Universe. Though they are harmless to human and by extension our environment, it is possible that they may view our planet like the Sentinelese tribe of India^{63,64,65} that are fully contained and laborated by her far more advance relatives. It is undoubtedly possible that our planets and it inhabitant (regrettably including human) are progressively been experimented, and involuntarily influenced. In fact, we the current human race may be a product of manipulative science by these beings from our origin earlier parents that arrived this universe. Their intentions and purpose for human and her environment is shrewd in how they perceive our threat and significant to our immediate universe and to other universes which involves them. There is another possible reason for their current and recurrent interaction with Earth. These may involve introduction of new micro-organism, diseases, changes in the atmospheric makeup, alteration in geographic and geological process, influence in human intelligent and productive outcome, promoting ethnic and regional conflict and/or peace, initiating various forms of belief and views.

Letting this UFOs know that we are open to positive interaction and cross-ideas is very important to our survival and beyond Earth destiny. Channels of relationship that involves all races, belief system of the world should be initiated. It is possible that a particular group, sect or culture can help initiate this conscious contact. Also global education should be initiated so that they can be free to relate and expose themselves at anytime. It is possible that they are currently operating via the invincible route, a principle and technology we eras away from. This will encourage save and productive interaction between these alien and human any place and anytime. This will also encourage the UFOs to reduce their seemingly clandestine activities that may not be to humans utmost benefit.

Trans-universal sharing of ideas that will help human take charge or be involved in her destiny and also gain knowledge that may never be attainable within human time frame, such as moving faster than light or through other special medium of transportation, technology and communications that has made them contact and monitor us with ease. It is important we establish a trustworthy relationship with this being so that we will not be seen as a variable to existence. It is also possible that through crossing of ideas we may know more about our origin, longevity with ability to visit other liveable planets and universes with ease.

Failure to directly and peacefully engage these beings may leave us at the mercy of their assumption and possibly lost in driving, engineering and designing our fate. They should not be perceived as enemy or hated intruders, else they might see us as a toxic entity: A view that will be catastrophic to enjoying our existence.

Conclusion

The UFOs (and Alien) which are deemed rudimentary may be a super version of us that are constantly cultivating information and influencing many aspect of our lives. Therefore, there is the need to foster a platform of convenience and profitable relationship so that we can be involved with the variables of our existence.
