ABSTRACT:

This study focuses on investigating the use of augmented reality application tools, one of the latest elements of tourism technology, in the tourism industry. With the understanding of data science, augmented reality is seen for the first time and the changes and developments it has experienced in history are analyzed. Then, the usage areas and types were examined. Nowadays, it seems almost impossible not to use augmented reality as a real technological dimension in tourism, where it will provide a large market and good competition. This article examines 12 applications in various sectors such as transportation, accommodation, catering and museums.

Keywords: Tourism, Augmented realitya, Market

1. Introduction:

Augmented Reality is used in medicine, education, architecture, business, tourism, etc. It is a complex field where information technology is used in many areas. The purpose of this article is to provide an overview of the use of augmented reality technology in tourism technology. This technology is changing the traveler experience, making travel easier, more interactive and more convenient. thus improving the visitor experience throughout the process. Augmented reality is an interactive virtual environment in which real-world things are enhanced. Since the use of augmented reality technology in the travel industry is still a new development, new applications are constantly emerging. Augmented reality focuses on improving the perception of physical reality through computer-generated images. Augmented Reality: is a visual technology that combines computer-generated information (such as text, video, images, GPS data, and other multimedia formats) onto a view of the world (for example, captured by a computer, mobile phone, or phone camera). path. other equipment. In an age where technology continues to change the world, augmented reality (AR) has become a game changer in the travel industry. Augmented reality, the combination of digital information and the real world, is changing the way we explore and experience new places. These new technologies open new possibilities to visitors, improving their relationships with the places they visit. In this 21st century travel guide, we'll delve into the fascinating world of virtual reality and explore how it can transform the way we travel, explore, and immerse ourselves in different cultures and regions. Augmented reality enriches traditional travel experiences by embedding content into the physical environment. It bridges the gap between the unknown and the known by providing the audience with information, content and interactions. Imagine walking through a historic city and instantly receiving historical information, restaurant recommendations, and even interpretations of local signs and menus from your smartphone or smart AR glasses. Augmented reality allows travelers to learn more about and connect with their surroundings, creating a deeper and more meaningful travel experience. What is the weather forecast?

Methodology:

The first way is to use AR for seamless navigation and search. Visitors can access AR-enabled apps or devices that take them to unfamiliar places, providing real-time information about attractions, local history and helpful tips. AR can issue navigation instructions to ensure travelers don't get lost and provide insight into the significance of the places they visit. Additionally, AR apps can offer virtual city tours where visitors can immerse themselves in the history and culture of a place by interacting with 3D models, audio guides, and even realistic recreations of historical events. Other methods include using AR for translation and culture. AR applications facilitate foreign communication by instantly translating signs, menus and spoken words. Additionally, AR can provide cultural context by providing information about local culture, traditions, and customs. By pointing at AR-shaped objects on objects or areas, visitors can obtain detailed information about their cultural and historical significance, enriching the law of cultural experience. AR can be used to personalize travelers based on their preferences and interests. By analyzing user data and preferences, AR apps can recommend relevant activities, restaurants, and attractions, ensuring that each traveler's itinerary is tailored to their needs and specific needs. This approach aims to improve the overall travel experience by providing visitors with options that suit their personal preferences, enabling them to spend the most time in the destination.

Flow chart
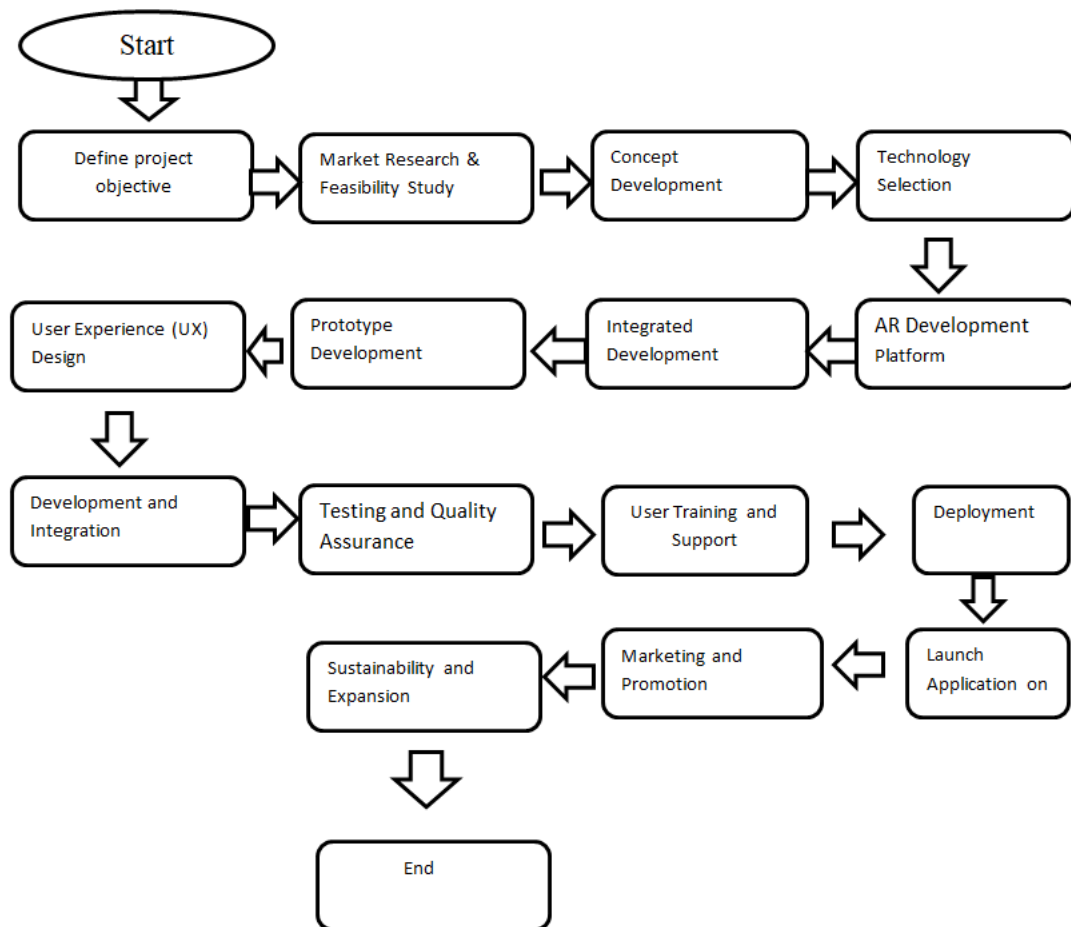

Hardware Requirements

- RAM: - 8GB(min)

- Hard Disk: -128 GB.

- Processor: - intel i5 or above.

- Android Device (version 6 or above)

Software Requirements

- Operating System: Window OS.

- Software: Android Studio.

Results

Augmented reality (AR) travel guides have gained significant value in the tourism industry as they can enhance the entire travel experience of tourists. Here are some points that highlight the importance of AR travel advice Integration AR travel advice allows travelers to play with and interact with chat. By projecting digital information into the real world, visitors can meet more and remember more by acquiring historical facts, cultural information and other relevant information.

Personalized experience: AR travel guides can be customized according to personal preferences, allowing visitors to explore places according to their preferences. AR can provide great recommendations and content, whether it's history, art, food or entertainment.

Real-time information: AR guides can provide information about local events, weather, traffic and emergency alerts. This real-time information ensures visitors have the latest information to plan their business.

Translation: AR can quickly provide translation, eliminating language barriers for visitors who do not speak the local language. This feature supports communication and all travel.

Navigation and wayfinding: AR can provide GPS-based navigation that directs visitors to their chosen destination and also provides additional information about the area along the way. This is especially useful for exploring unfamiliar cities or remote areas.

Education and Training: AR travel guides can be used as educational tools to educate tourists about the geography, culture, and safety of the site. This makes the journey much more enjoyable.

Accessibility: AR can improve accessibility for people with disabilities. It can provide descriptions, haptic feedback, and other features to ensure all guests can enjoy the experience.

Data collection and analysis: For tourism businesses and local governments, AR travel guides provide a useful data collection tool. Analyzing user interactions can help sites better understand visitors and preferences, thus helping to improve business and infrastructure.

Competitive advantage: Businesses in the marketing sector can benefit greatly from the use of AR technology. Offering new and useful AR travel experiences can attract tech-savvy travelers and differentiate a place or service from its competitors.

Sustainability: Destinations can reduce the use of maps and guides by providing digital guides to tourists, thus contributing to the sustainability of waste reduction.

Conclusion

In summary, the integration of augmented reality (AR) into travel guides is a revolution in the way we explore and experience new places. This technological development has proven to be a powerful tool that improves visitors' interaction with the sites they visit, sharing their information, participation and self-awareness. With AR, navigation becomes seamless, breaking the language barrier and taking culture to new heights. Not only does it make traveling easier, it also allows travelers to connect with their surroundings and develop a sense of culture and appreciation. As we stand at the intersection of technology and travel, AR's potential to shape the future of travel is limitless. The adoption of AR in the travel industry offers exciting opportunities for travelers, businesses, and destinations and represents a transformative force that will make travel more enjoyable, more convenient, and more fun than ever before.
