ABSTRACT

A teacher can help pupils thrive in life by acting as a best friend, a third parent, an inspiration, a role model, a well-wisher, etc. A teacher molds each pupil into a better human being with all the moral qualities in addition to imparting knowledge. The transmission of wisdom and knowledge is the main goal of education. This is not, however, restricted to knowledge from textbooks. to mold a student's behavior, character, and ability. As previously said, teachers assist students in learning more than simply the material covered in the syllabus.

A teacher who is committed to their students' educational journeys is the perfect one. They watch out for the pupils, assist them, inspire them, and comprehend their needs and issues.

Keywords: Student Psychology, Psychology, Teacher, Classroom, Learning, Behaviors

Introduction

An intelligent and engaging person to interact with is what makes a good teacher. Their ideas are not just focused on their jobs. They each have their own interests and opinions on a range of topics. A competent teacher should possess a variety of abilities, such as patience, empathy, flexibility, teamwork, and communication. A lifelong love of learning, an engaging classroom presence, the importance of real-world learning, the sharing of best practices, and others are further traits of excellent teaching.

Patience, empathy, and a sincere love of teaching are traits that make a great teacher. They ought to possess strong communication abilities and subject-matter expertise. An ideal educator fosters critical thinking, establishes a welcoming and inclusive learning atmosphere, and modifies their approach to suit the requirements of a wide range of students. They should also cultivate a cooperative and constructive relationship with their pupils by being fair, courteous, and open-minded.

The instructor has a duty to protect the student's dignity and not to degrade them. This will pique students' interest in what they are studying in class. Strikes are a good way for teachers to connect with their students. Good educators must place a strong emphasis on students' healthy interpersonal and social growth. Be encouraging at all times. Aim to provide each kid in the classroom with individual attention. Be organized, consistent, and fair at all times.

Teachers and students relationship

When a teacher and student work together to earn each other's trust and respect, they have a positive connection in the classroom. Getting to know your students better, giving them options, and motivating them to become better learners every day could all be part of this relationship. Mutual respect, open communication, and trust are the most important aspects of a successful learning partnership between a teacher and student. Students are more inclined to participate actively in the learning process and take responsibility for their education when they perceive that their teachers value them.

Student-teacher connections that are positive assist kids in addressing these needs. In order to help pupils feel competent, teachers provide feedback. Students feel more in control of their education when their teachers are aware of their interests and preferences and treat them with respect. Teachers

have a significant impact on students' lives, not just in terms of their academic progress but also in terms of their personal development and character formation. Teachers leave a lasting legacy that goes well beyond the classroom since they frequently act as mentors, advisors, and role models in addition to their teaching duties.

Social and Emotional Development: Students' social and emotional development is greatly influenced by the teacher-student bond. It supports the growth of their effective interpersonal skills, empathy, and respect for authority. They learn moral principles that will benefit them throughout their lives.

Students that adopt positive behavior for learning habits are better equipped to study, advance academically, and maintain positive connections with peers and adults. Students that establish positive behavior for learning habits find it easier to transition into adulthood, work, and college.

Teacher's behaviors at school

When it comes to making sure that everyone receives a high-quality education, teacher behavior is crucial. Teachers' interactions with children, parents, coworkers, and staff management are directly impacted by their behavior. Furthermore, how the teacher acts and runs the class may have an impact on students' motivation to learn as well as their willingness to attend.

Lesson clarity, instructional diversity, task orientation, active participation in the learning process, and student success rate are the behavioral elements that are essential to effective teaching.The capacity to encourage student participation in the lesson at hand by implementing particular measures to raise the likelihood that students would actively engage during instruction is a second example of a unique effective teacher conduct. When a youngster behaves well, always thank them and give them encouragement. Model the desired behavior for youngsters to follow and help them treat others with respect. Teach the kids the value of treating people how you would like to be treated. Play out several scenarios to show suitable reactions.

The way that teachers think, act, and approach their students and teaching is referred to as their attitude and it can have a big impact on how well children learn. The psychological propensity or disposition of teachers to react either positively or negatively to their line of work as educators is referred to as their attitude.

Conclusion

Redesigning or adapting teacher preparation programs is necessary to foster inclusive beliefs, attitudes, and abilities. It is imperative to assist educators in recognizing their prejudiced attitudes toward students with disabilities and multiple learning styles, as this has been shown to impede students' academic advancement. Instructors ought to embrace variety in the classroom and have faith in each child's ability to learn. In addition, educators must to feel empowered to accept responsibility for their work and have faith in their ability to instruct every student. Encouragement of instructors' active, collaborative, and reflective learning throughout the training can help with this.
