### **ABSTRACT:**

Healthy primary teeth play a very important role in the child's life because they help chew, aesthetics and phonetics and maintain space for permanent teeth. Therefore, medical complaints arising in children should be treated with Homoeopathy because it is a holistic method of treatment.

Children should be ensured by optimal health care for the oral cavity as they create a healthy foundation on which adult dental health will depend.

The aim of the study is to explore the effectiveness of the basic synthesis repertory in the treatment of Dentitional complaints in children.

After the patient's guardian's consent, homeopathic cases were carried out and homeopathic medicine was administered according to the similarity of symptoms. Thirty out-patients with clinically confirmed cases of Dentitional complaints were included in the experiment and treated with homeopathy. For this study, patients who visited hospital OPD were selected for inclusion and exclusion criteria.

---

**KEYWORDS:** Dentitional Complaints, Synthesis Repertory, Repertory, Homeopathy and Homeopathic Medicine.

---

### **INTRODUCTION:**

It is often said that the mouth is a mirror of their own health. The manifestations that occur in the oral cavity for any systemic disease are caused by its complex embryonic origin.

Dental medicine is one of several areas of medicine concerning lesions of oral mucosa, which are many times a sign of the underlying systemic disease. Dr. Samuel Hahnemann, in the second part of the 20th century, brought with his technical and synthetic progress to revitalize human beings as an overall entity, mind, emotions and "holism". The use of homeopathy helps today's dentists to provide their patients with holistic care. More dentists acknowledge that attached to teeth is a human being, and that in the treatment of a localized manifestation of the disease in the mouth, it is necessary to properly consider the general physical condition of the patient. Only when the dentist understands a relationship that has an oral disease to the physical and mental aspects of the patient can he offer fully therapeutic service. The dentist enrolls to collect objectives from the body of the body such as infections, toxic chemicals and metals, electromagnetic disorders and radiation, food allergens and nutritional deficiencies, biochemical imbalances and psycho-emotional anxiety and dysfunction to restore natural biological function, vitality of mind and the bodies and the ability of self -regulation and maintaining homeostasis.

### **REVIEW OF LITERATURE:**

Children will probably have a number of complaints starting with simple fever and diarrhea to a heavy spasm and a high rise in temperature. As in most cases, doctors and inexperienced people can assess young parents that the main cause of problems in this particular age group can only be a natural teeth result, treatment and result often become poor. So every time the child becomes ill and no other cause can be proven to be related to the specific condition of the disease, we should always ask the mother or the operator of the eruption of the tooth in this child.

The child suffers from a number of complaints during his teeth. A special and definitive change in behavior is also visible, which is in most cases first. The child becomes very irritated, shouts and moans all the time and becomes very restless if it is relatively old, while the child usually expresses his agony only by continuous crying. Most children also suffer from some or other type of gastrointestinal problems during this phase. Diarrhea is more common than a fee. Low -degree fever is very often seen in many cases, which is mainly a traumatic nature (trauma that suffers from rubber when teeth start to explode). In some cases, cramps are also observed. During this period of their development, some children also suffer from different types of rash. In poorly nourished children and intersections, the teeth may be delayed.

Homeopathy plays a big role when there is a delay in the teeth and no teeth appeared at the age of 9-10 months. The pediatrician could give calcium because he thinks it is a shortage that causes a problem, but in fact the problem is that the child is unable to put calcium from milk into the teeth. The role of calcium accessory is therefore minimal. Homeopathic medicines such as *Calcarea Carb*, *Silicea*, *Tuberulinum* and *Calcarea phos* can do miracles for slow teeth. These drugs can help with eruption of teeth.

#### **Treatment-**

The most important thing is the assurance of parents and make them understand that this is a purely natural consequence of a growing child that exceeds a very important developmental milestone of his life. This will help a lot, yet we have amazing remedies to alleviate the suffering of these innocent children. There are few medicines that can often be required to handle children during their teeth.

Homeopathic corrective measures for graduation complaints:

#### **Aethusa cynapium**

Remedy for children during teeth, especially in the hot summer season. There is a significant expression of pain and great anxiety. However, the characteristic is that the child cannot tolerate milk in any form during the teeth. Immediately after being fed, they vomit a large amount of clotted matter. Even curd is excreted in the form of a stool. This digestive problems are purely christening and the child becomes very exhausted and sleepy after each attack or vomiting.

The characteristic symptoms mainly relate to the brain and the nervous system associated with gastrointestinal disturbances. This drug leads to anxiety, crying and expression of restlessness and dissatisfaction. Symptoms set with violence.

#### **Arsenicum album**

Its general symptoms often lead to its successful application. The most important are discharges, exhaustion and restlessness, especially after midnight.

The child is thin, weak, has a restless, released and wax face. The vomiting of all fluids soon after swallowing them very often drinks cold water. The rubber over the tooth looks blisters or seems to be filled with a dark, watery liquid, dry scaly milk, hits a head or face for relief.

#### **Belladonna**

Amazing medicine for children under a piece of fever and cramp. It is indicated by its brain hyperemia, high fever and tendency to convulsions, violent starting and jumping, sleep or awakening. Red face, glaring eyes, head of head, hot skin burning, stools composed of green, thin, sour smell and baby often shakes during stool. There are many turgid blood vessels in overloaded gums.

#### **Borax**

The child is afraid of moving down almost in all complaints. Excessive nervous, easily frightened. Starting and calling from sleep, he wants to stick to something as if he were afraid of falling. Free, pappy, attack stools. The child cries before urinating. Aphthae in the mouth, on the tongue, inside the face, easily bleeds to touch, preventing the child from nursing. Hot mouth, dryness and thirst, rubber, salivation, especially during teeth.

#### **Calcarea Carb.**

It is usually looking when the teeth are difficult and delayed. The child is also delayed when entering all bones. Fontanels and stitches in the skull remain open for a long time; Bones also evolve slowly and often develop irregularly. The child is thick, sagged, fair, easily sweats and cools. Drought in the mouth alternating with saliva. He longs for cold drinks, more at night, longs for sweets and salty food, hunger dog in the morning, longs for eggs. She eats unstable things, prone to diarrhea. The belly is large, hard, rich sweat, soak a pillow.

#### **Calcarea phos.**

Very similar to *Calcarea Carb* in its properties. The only difference is that while the first is used for oily, flabby, fair children, this medicine is more suitable for children who are dark and anemic, which are thin, weak and tight. Stated in the delayed teeth and difficulties with this period.

Children have cold limbs and weak digestion. It has affinity where bones form stitches or symphysses and all its symptoms are worse of the weather change. The fontanels remain open for too long. Cranial bones soft and thin. The infant wants to treat and easily vomits all the time. Swollen almonds, they can't open your mouth without pain. There is a rapid disintegration of the teeth. Overweight diarrhea, greenish thin stools.

#### **Chamomilla**

The whine of restlessness, boundaries, moans, a child wants many things he refuses. The child can only be quiet if it carries. One face red and hot, the other pale and cold. Capspire of children, teeth, teeth worse in warm beverages. Diarrhea during teeth. Stool hot, green, watery, fetid, mucosa with colic. Chopped white and yellow mucus as chopped eggs and spinach with rectal pain. Irritated, dry, ticklish cough. Sagging mucus in the baby's chest. Gums red and tender.

Homeopathic tooth extraction drugs

Phosphorus, hamamelis, arnica - before extraction

Arnica, Calendula, Hamamelis, phosphorus - after extraction

Hamamelis - after extraction of a mobile tooth

Homeopathic drugs for dental abscess

Belladonna - dental abscess accompanied by redness and pulsation.

Bryonia - acute inflammation or when solid pain is relieved pressure.

Hepar sulfuris - dental abscess accompanied by pus formation. Myristica - swelling accompanied by anesthesia of the area.

Pulsatilla - pain is highlighted with heat and releases cold water.

Pyrogenium - pus is present without drainage.

Silicea - accelerates the discharge when the pus is released.

There are also medicines such as *Flue*, *Silicea*, *Mercurius*, *Hecla Lava* for abscess or fistula dentalis.

Holistic dentistry recognizes and deals with the mind, the body and spirit of the patient, not just his "teeth". And sets the following basic principles:

1. Proper nutrition for prevention and reversal of degenerative dental disease.
2. Avoiding and eliminating toxins from dental materials.

3. Prevention and treatment of small -cloth tooth slip (problems with bite = physical imbalance)
4. Prevention and treatment of gum disease on its biological basis.

Healthy habits are instilled early. The prevention of dental diseases, if sown early in childhood, childhood or adolescence, bears fruit in the form of good health, not only dental, but generally throughout life.

Prevention, especially primary prevention, where the disease is not yet occurred, can only be introduced or initiated in children. Pediatric dentist represents and implements the principles and concepts of prevention of dental diseases from childhood and adolescence. In fact, it is the foundation on which the future health of adults depends. A healthy mouth, if kept from childhood, develops a healthy environment for the development of permanent teeth.

Healthy primary teeth play a very important role in the child's life because they help chew, aesthetics and phonetics and maintain space for permanent teeth.

Conventional therapy believes that the symptoms of the disease are a direct consequence of this disease and seeks to suppress them with the drug while homeopathy considers symptoms to be an attempt to overcome the disease and try to support this process with the drug and not to transform it, and do not burden it and not to transform it And not to spin it and not to transform it and not to spin on it, and not to spin it, and not burden and not to transform it and not transform it, and not burden and not spin. .

Homeopathic drugs are based on a holistic approach to health that deals with the disease of the body's own healing capabilities.

Most children suffer from complaints during the dental period, referred to as a dental complaint. The nature of these complaints differs from diarrhea, coughs, coryzy, fever after irritability. Such teeth complaints are documented in homeopathic literature, homeopathic repertory.

The basic repertoire of the synthesis is the latest repertoire and consists of 38 chapters, many specific and general sections, so a systematic scientific study can be performed to satisfy the need for constitutional drugs.

The basic synthesis is edited by Dr. Frederik Schroyens in cooperation with leading homeopaths around the world. He must bring the soul of James Tyler Kent Great Joy to finally finish his repertory, because the accessories, repairs and changes in his own copy 2.

The introduction of all original repairs and increments of the Kent into the basic synthesis makes this repertoire more accurate and more in accordance with Kent's thinking.

Kent's is one of the main repertory that allows us to treat miasmatic problems, has inherited chronic miasmatic tendencies and stains that are constantly progressing and that today threaten human degeneration. Treatment of chronic Miasmatic Taints is the area of the greatest importance of a law of similar and the use of this valuable repertoire.

#### **Homeopathy can keep you with a smile!**

"Dentition" is one of the important milestones in the child's life. This is the most important period because children are highly sensitive during this period. With homeopathy, we can treat all their complaints during the teeth, giving them a "happy teeth" and a healthy life ahead of us!

---

#### **CONCLUSION :**

To bring children happily from childhood through adolescence is a difficult task and requires an approach that is carefully planned, co ordinate and implemented by knowledgeable people.

Reading the mind of a child, understanding the beauty and tenderness that resides within a child, managing a two – year old in the clinic, effective and educative communication with the parents are to name a few tasks that need skill and knowledge. The biggest challenge lies in identifying a fearful, anxious and nervous child and converting him into a confident individual capable of the responsibility of looking after his own general oral health.

Dentition is one of the most important milestones in a child's life which usually starts at a tender age of 6 months. When babies are about six months old, the level of antibodies passed on from their mother starts to fall, which changes their immune systems. Along with the tendency to put things in their mouths, this makes them more prone to illnesses. "Baby teeth" are as important to infants and children as permanent teeth are to older children and adults. These "first teeth" are necessary for a child to chew and speak. But baby teeth serve another very important purpose-- they save space for the child's future permanent teeth.

Homeopathy is a holistic system of medicine. The selection of remedy is based upon the theory of individualization and symptoms similarity by using holistic approach.

This is the only way through which a state of complete health can be regained by removing all the sign and symptoms from which the child is suffering. The aim of homeopathy is not only to treat teething troubles but to address its underlying cause and individual susceptibility. As far as therapeutic medication is concerned, several remedies are available to treat teething or troubles dentition that can be selected on the basis of cause, sensations and modalities of the complaints.

Thus with homeopathy we can we can provide children mild and gentle care and treat all their complaints during primary and secondary periods of dentition.

The essential synthesis repertory served as a vast source of reference for the selection of similimum as it covers large number of rubrics under different sections with large number of medicines.

In my study, homeopathic remedies have given good improvement in the patients, but as per the literature review and by the present study, this study concludes that homeopathy can give good hopes in management of dentitional complaints as they were suppressed previously by various therapeutic measures.
